ARCTIP / BOTTIP PITCH DECK

Frictionless Native Micro-Payments & Tipping Protocol

Purpose-Built for High-Throughput EVM Networks & BOT Chain 677

THE PROBLEM ON LEGACY EVM

1. High Barrier to Entry: Tipping or micro-payments in stablecoins requires volatile gas tokens plus two-step approval transactions (approve + transferFrom).

2. Fee Inefficiency: Paying /usr/bin/bash.50-.00 gas for a .00 tip makes micro-tipping economically unfeasible.

3. Custodial Risk: Existing platforms lock funds in pooled contracts, exposing users to bridge or platform exploit risks.

THE ARCTIP / BOTTIP SOLUTION

1. 1-Step Non-Custodial Transfer: Direct peer-to-peer settlement via native value transfer. Value flows instantly straight into recipient wallets.

2. On-Chain Immutable Memos: Public 280-char messages permanently recorded via contract events for verifiable social & commercial proof.

3. Shareable URLs & Mobile QR: Creators, OSS builders, and agents get clean links (/tip/[address]) and dynamic QR codes for frictionless mobile onboarding.

TECHNICAL ARCHITECTURE & BOT CHAIN INTEGRATION

Modular, Multi-Chain Ready Architecture for EVM Chain ID 677

CORE TECHNICAL CAPABILITIES

? Smart Contracts: Solidity 0.8.20 non-custodial forwarding with zero-overhead indexing.
? Frontend Engine: Next.js 14 App Router, Viem v2, TypeScript strict mode, responsive Swiss-fintech design.
? Direct RPC Polling: Live query of block numbers, gas fees, and recipient stats without dependency on proprietary subgraphs.
? Production Deployment: Battle-tested on Circle Arc L1 (Chain ID 5042) and ready for immediate deployment on BOT Chain (Chain ID 677).

BOT CHAIN ECOSYSTEM ALIGNMENT (TIER C: COMMUNITY GROWTH)

? Real On-Chain Transactions: Every tip generates organic, genuine micro-transactions that directly drive user interaction frequency and network gas utilization.
? Developer & Creator Magnet: Enables new Web3 builders, AI agents, and influencers to monetize on BOT Chain via personal links without coding complex paywalls.
? Anti-Sybil Native Design: Real value transfers with organic user memos naturally discourage wash trading or artificial volume farming.
? Live Production App: https://arc-tip-phi.vercel.app | Public GitHub: https://github.com/Gieez/arc-tip
